## How to increase Java Heap Size for CloudBacko Pro

---

### To increase the Java memory settings:

1. Exit CloudBacko Pro and make use there are no active backup jobs running.
2. In a text editor open up the C:\Program Files\CloudBacko Pro\config.ini file. You'll see:

```
Default settings:  
app.system.ui.vm.opt.xms=128  
app.system.ui.vm.opt.xmx=768  
app.system.conf.language=en  
app.system.product.name=cbp  
app.system.common.format.datetime.hourinday=true
```

3. Depending on the amount of free memory on your machine, you can increase the settings from 768M to 2048M.

New settings:

```
app.system.ui.vm.opt.xms=128  
app.system.ui.vm.opt.xmx=2048  
app.system.conf.language=en  
app.system.product.name=cbp  
app.system.common.format.datetime.hourinday=true
```

4. Save the config.ini
5. Go to [Administrative Tools]>[Services]>[CloudBacko Pro Services] and restart the service for the settings to take effective.
